

UNCLE SAM SAYS: Last chance to save up to \$4000

Image above shows from left to right: solar pool heater, solar electric system and solar water heater. Systems can be installed on roof or ground rack.

Act now and save up to \$4,000 in Income Taxes for 2007!

Using solar energy can save you money and reduce your direct impact on the environment. Federal, State and Local incentives are now available to help you achieve your goal of energy independence and to reduce your carbon footprint. You must purchase the system before December 31, 2007 to qualify.

SOLAR ELECTRIC

Solar Electric (PV)

- Up to \$20,000 FL State
- Up to \$2,000 Federal
- Reduce bills 20-90%
- Run meter backwards!

Average Sample

List price \$27,000.00
 Florida -\$12,000.00
 Federal -\$2,000.00
 Your Cost \$13,000.00

SOLAR WATER

Solar Water Heater

- \$500 FL State Rebate
- Up to \$2,000 Federal
- Reduce bills by 80%
- Save 2 tons CO2/year

Average Sample

List price \$5,000.00
 Florida -\$500.00
 Federal -\$1,650.00
 Your Cost \$2,850.00

SOLAR POOL

Solar Pool Heater

- \$100 FL State Rebate
- \$0 Operating Costs
- Extend Swim Season
- No Pollution

Average Sample

List price \$3,500.00
 Florida -\$100.00
 Federal
 Your Cost \$3,400.00

Save even MORE with Utility Company Incentives!

Participating companies will purchase excess energy created by your solar electric system. Contact your local electric utility for details.

Solar HOME MakeOver

SOLAR WATER HEATERS provide instant hot water from a collector on your roof that is heated by the sun and a storage tank (your current or an additional water heater). This hot water can be used for showers, washing machines, dishwashers and in the kitchen sink. A solar water heater can provide up to 90% of a family's hot water needs.

INSTANT HOT WATER system delivers hot water in 15-30 seconds without wasting a single drop of water and by using only a fraction of a penny's worth of electricity. Saves an average of 20-30% on water & sewer fees.

SOLAR ELECTRIC or photovoltaic cells are used to convert the sun's energy into electricity for your home. A 4.5 k Watt panel system is large enough to reduce the electric bills by at least \$65/month. The real value of the system is in meeting the survival needs for a family during storm-related power outages. Basic appliances in a home can still run for several days due to battery back-up in the garage.

SOLAR SKY LIGHTS supply a daylighting system that saves energy by using a natural light source. Great for kitchen or areas where families gather most in the house.

SOLAR VENT FAN pulls the heat right out of the attic; it can lower temperatures by as much as 50°.

SOLAR POOL HEATERS produce up to 100% of the pool heating needs for a family. A solar pool heater can extend the swimming season to nearly year-round in warmer climate areas.
