## Return on Investment

\&

## Dollar Savings per year by using H\$

To better evaluate the effectiveness and energy savings in your pool by using Heat\$avr, input the following variables to generate an accurate Return on Investment and Dollar Savings per month and per year:

1. Size pool (Sq Foot)- with multiple pools- estimate an average
2. Savings in energy- estimating the savings- minimum savings of $16.2 \%$, upwards to $40 \%$ energy savings, and an average of $25 \%$ energy savings
3. Total energy savings by using Heat\$avr- what is the percentage of energy savings expected from using Heat\$avr (see "ideal conditions")
4. Total number of pools- how many pools in your organization?

Variables:

Cost per case of Heat\$avr- US \$
Size pool (Sq. Foot)- surface area (width*length)
*Savings in energy with Heat\$avr
Price of Gas/ Per Therm:
(1Therm $=100,000$ BTU's or 0.1055 Gj )

Your cost of energy per month Your dollar Savings by using Heat\$avrl year Your cost of Heat\$avrl year

* Note:

The above information is based on a third party supervised test conducted on behalf of a client.
The parameters of the test are as follows:
Type of pool- Indoor
Size of pool- 1,200sq foot
Heater specification:
Model Type- CR405-ENAFME
Total Input- 4 Therms $/ \mathrm{hr}=400,000 \mathrm{BTU} / \mathrm{HR}$
Certified Net (output)- 82\%
Net Output- 319,200 BTU/HR.
