

Multi-Room Heating System

Heat from one to eight individual rooms with SolarSheat Multi-Room Space Heating Systems. Each system includes 1-8 SolarSheat 1500GS panels, an appropriately sized fan, controls, duct kit, side hole gaskets, detailed instructions, etc. The table below summarizes each system. The 1501DC and 1502DC are powered with PV panels to keep the whole system electrically separate from the rest of the home! Tools are available to choose the correct duct type depending on the situation. SolarSheat Multi-Room Space Heating Systems are compatible with our Two Stage Zone Control System, to add further intelligence to the system. Collectors may be mounted on the roof or wall.
