

SolarSheat 2 Pak Wall Mount

How It Works: The SolarSheat 1500G 2 Pak can supplement the heat for a large room up to 1500 square feet* in the daytime and installs in a few hours on a south facing wall or roof.† The SolarSheat 1500G 2 Pak can drive solar heated air through a wall or through a cathedral ceiling. For longer duct runs, solar powered booster fans are available. It's the perfect heater when there is a large area to heat, adjacent to the south facing wall or roof†, high temperature rises (40°F & higher) and/or cloudy weather performance are desired. A duct kit, including a digital thermostat, is included with the SolarSheat 2 Pak. The solar powered fan keeps it electrically separate from the rest of the house. Tough tempered glass keeps the air hot even during cold and windy winter days. The fan is built into the collector so installation is a snap!

* depending on heat loss and solar gain.
