

# SUN FROST

## REFRIGERATOR/FREEZER AND CABINET CLEARANCES

The diagram below shows the clearances needed for all SUN FROST units. All of our models have the same depth and width, but the heights vary. Please see our price list or product list for dimensions of each SUN FROST refrigerator/freezer. **Note that the doors are mounted on a continuous piano-style hinge, and require 3 3/4" clearance to the side when opened 90°.** Custom wood finishes may add up to 1/4" to the necessary widths.

Because of our top-mounted design, SUN FROST units can be placed directly against a wall, but we recommend 6-8" of clearance above for ventilation and increased efficiency.

We recommend using a cabinet below the units to elevate the refrigerator to a more convenient height, while providing storage for dry goods. A cabinet 12" to 16" high works well with our RF16 or RF19 models. For our RF12, we recommend a cabinet 18" to 24" high. Our 4 cubic foot and 10 cubic foot models can be placed on top of existing cabinets, or at a height of about 36". SUN FROST offers 13" and 24" high cabinets with two side-by-side sliding drawers. A 4" stand is also available if there is not enough space to install a full cabinet.
