

# Ecosavr™ and Heatsavr™

## Plastic Pool Blankets vs. Liquid Solar Pool Cover Benefits Comparison

	Plastic Pool Blanket	Heatsavr™ and Ecosavr™
Application	Manual application is time consuming, potentially complicated and requires one or more people. Requires a considerable amount of space for storage and rollers.	Automatic, hands-free easy application that requires absolutely no storage and no labor to apply.
Effectiveness	Savings of 50-70% can be achieved but <b>only when the cover is correctly covering the pool!</b> There can be no savings if the cover is not in use. It is very difficult to find a traditional pool cover to protect your uniquely shaped pool, and impossible to cover around fountains and/or waterfalls.	Savings of up to 45% can be achieved <b>24 hours a day, 7 days a week.</b> You will be fully covered, <b>even when the pool is in use!</b>  A liquid solar pool cover forms itself to any shape you can create, and even works around your fountains and waterfalls.
Esthetics	Even a high quality plastic pool blanket diminishes the beauty of your yard, whether it is covering your pool or rolled up beside it.	The liquid cover is entirely transparent and allows your pool to look its natural best all day, every day.
Safety	While a pool cover is in use, there is always a risk that a child or beloved pet will become trapped under the cover. While a cover is being removed or is in storage, there is a risk of injury or entanglement.	Heatsavr™ and Ecosavr™ are safe for all pool users. Pool owners and operators can relax, knowing that their pool is safely covered at all times.
Cost	A plastic pool blanket can cost <b>hundreds of dollars</b> for the blanket alone, with extra costs mounting for unique design, automation and storage equipment.	Heatsavr™ and Ecosavr™ have a proven 6:1 rate of return and, for an average backyard pool, usually costs only \$10-12 a month, <b>with no extra or hidden costs!</b>
