Depending on the application, the system may require a pump switch or pump control. The pump size and control are dependent on the requirements of the heating application.

1. The air vent is to be installed at the highest location of the system. The air vent must be sized correctly by a professional.

2. The recirculation pump is to provide no less than 2 gpm throughout the heating application. Temperature controls are needed throughout each TM-450.

- Each application component must be sized correctly by a professional.
- Each application and every individual application will differ in some way.
- There are many factors that change from application to application.
- A basic guide. Applications must be designed by a professional.

This drawing is a concept design and is intended to be used ONLY as a guide. }
