(4) Tapings
Storage Tank Application

Legend

1. The tank circulation pump is to be controlled by:
   - Y-Valve
   - Cold Water Inlet
   - Hot Water Return (optional)

2. The tank circulation pump is to provide no less than 2 gpm through each actuated T-Tank valve in the system. (Exception: no less than 4 gpm through each T-M50 model)

- Each application component must be sized correctly by a professional.
- Each application component and every individual application will differ in some way.
- There are many factors that change from application to application. Contact manufacturer or designer. Local and State Codes also dictate.
- A basic guide. Applications must be designed by a professional.
- This drawing is a concept diagram and is intended to be used ONLY as a guide.
